

BRANDON HAN

ML / AI Engineer | Machine Learning | Applied NLP | Agentic Workflows

brandonh4n@gmail.com | [LinkedIn](#) | [Github](#) | [Website Portfolio](#)

EDUCATION

University of Southern California	Los Angeles, CA
Master of Science, Computer Science	January 2024-May 2026
Relevant Courses: Advanced Databases Algorithms Machine Learning Deep Learning & Optimization Web Technologies	
University of California, Los Angeles	Los Angeles, CA
Bachelor of Science, Biochemistry	September 2017-December 2019

TECHNICAL SKILLS

Programming Languages: Python | Java | C++ | C | JavaScript | TypeScript | SQL | Go
ML and NLP: PyTorch | TensorFlow | Hugging Face Transformers | BERT | scikit-learn
Data and Evaluation: Pandas | NumPy | VADER | Model Evaluation
Engineering: Flask | FastAPI | Node.js | React | PostgreSQL | MySQL | MongoDB | Docker | AWS | Git

PROJECTS

Bias Induced News Generation with LLMs PyTorch, Hugging Face, BERT	Los Angeles, CA
Machine Learning Engineer	May 2026
- Engineered an automated evaluation pipeline to expose and quantify political bias across multiple LLM architectures - Built a pipeline for the ingestion, cleaning, and labeling of multi-partisan news snippets for LLM evaluation - Processed 14,000 biased articles to automate the generation and scoring of 1,700 test cases	
Stock Sentiment Tracker Python, Hugging Face, Flask, SHAP	Los Angeles, CA
Machine Learning Engineer	November 2025
- Fine-tuned FinBERT for informal finance text by relabeling StockEmotions with Twitter-RoBERTa and training on social-market language - Improved accuracy on informal finance text by 57% against baseline setup, then benchmarked using MSE, MAE - Implemented SHAP to inspect model predictions and identify finance-specific sentiment cues that were easy to miss in standard language models	
Weenix Operating System Kernel Development C, x86 Assembly, GNU Make, QEMU	Los Angeles, CA
Software Engineer	February 2025
- Engineered foundational system components for a 32-bit architecture - Developed process and thread life-cycle management, context switching, thread bootstrap, and scheduler queue primitives - Integrated software with emulated hardware (QEMU) using C and Assembly, navigating complex system constraints, physical memory allocation, and concurrency.	

EXPERIENCE

Wasabi Cloud Technologies	Boston, MA
AI Engineering Intern (Remote)	June 2025-August 2025
- Built a React dashboard that brought customer requests, upload failures, and deploy notes into one escalation timeline, reducing median incident handoff time by 23% - Created labeled datasets from historical support tickets, customer notes, and internal business text to improve AI model accuracy on company-specific language and recurring issue patterns - Developed a first-pass AI triage workflow that converted ticket text and error patterns into plain-language diagnostic notes for support teams	
University of California, Los Angeles	Los Angeles, CA
Research Operations Manager	January 2019-December 2023
- Led rollout of GPU-backed compute and multi-vendor lab systems, translating wet-lab constraints into implementation plans, integration tests, and researcher onboarding - Developed architecture and deployed automated workflows, imaging, and compute platforms through technical proposals and systems planning - Contributed to 5 peer-reviewed publications involving ML implementation, imaging pipelines, and research infrastructure
